

Where does your **Product**
QC go from here?

The power of **Simplicity**.

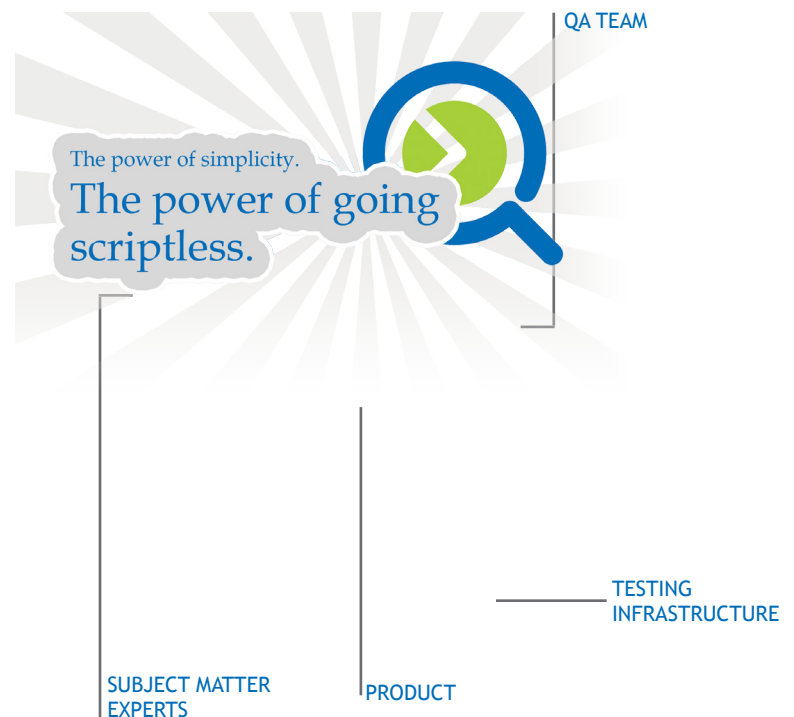

The Power of going **Scriptless**.

Qualitia empowers your QC team and your favorite test automation tool to become faster and better. It eliminates complexities posed by any of today's test automation tools and allows true script-free test automation.

Building test automation made easy.

Ideally any test automation tool should provide testing team with an easy-to-understand and easy-to-use platform to quickly automate regression test suites. A testing team should not be boxed by a tool's native language to build automation. Automation is the software's prerogative not the testing team's. Test automation tool should enable a testing team to do what they do best in the best way(s) they know. But, it should also give domain specialists, the control to align these test cases with business workflows and testing best practices.

Qualitia enables your QC team including the domain specialists to exploit your favorite test automation tool without having to know how to make it work for you. Automating regression testing with Qualitia is exactly like building test cases in MS Excel using English as a language. No matter, which underlying test automation tool you use, with Qualitia your testing team can now successfully automate large set of test cases upto 1.6 times faster than ever before. Also, the domain specialists can now actually establish the working of entire test automation suite or even an individual test case to ensure the product is tested for its optimum quality - not only once, or twice, but release after release.

Increase productivity like never before.

How many test automation tools shorten the time-to-automate? In real life the need to automate always spawns from the need to do more with less. Ironically, in the testing world, automating test cases requires more time, more skills, and more money. Often, the applications under test are larger, and therefore call for easier ways to not only automate but also simpler ways to manage thousands of test cases together. Against this background, it's unsurprising that companies settle for scattershot investments on automation and its maintenance.

Qualitia takes your QC team's productivity to the next level. With Qualitia it is test automation at machine speed! This means more test cases per unit of time can be automated without having to actually build automation code. [Qualitia accelerates test case generation through a highly tested library of more than 500 actions.](#) It also ensures even a slightest change in one of the actions can be quickly and easily managed in all or selected impacting test cases within an automation suite. Such an easy and faster test case maintenance ensures productivity improvements by up to 68 percent; thereby delivering maximum bang for your buck.

Optimizing test automation tool license strategy.

Test automation tools are built to run test automation. But, testing teams more often than not, use these tools to build test automation rather than to run it. Thus, the tools remain under-utilized and your investments on them under optimized.

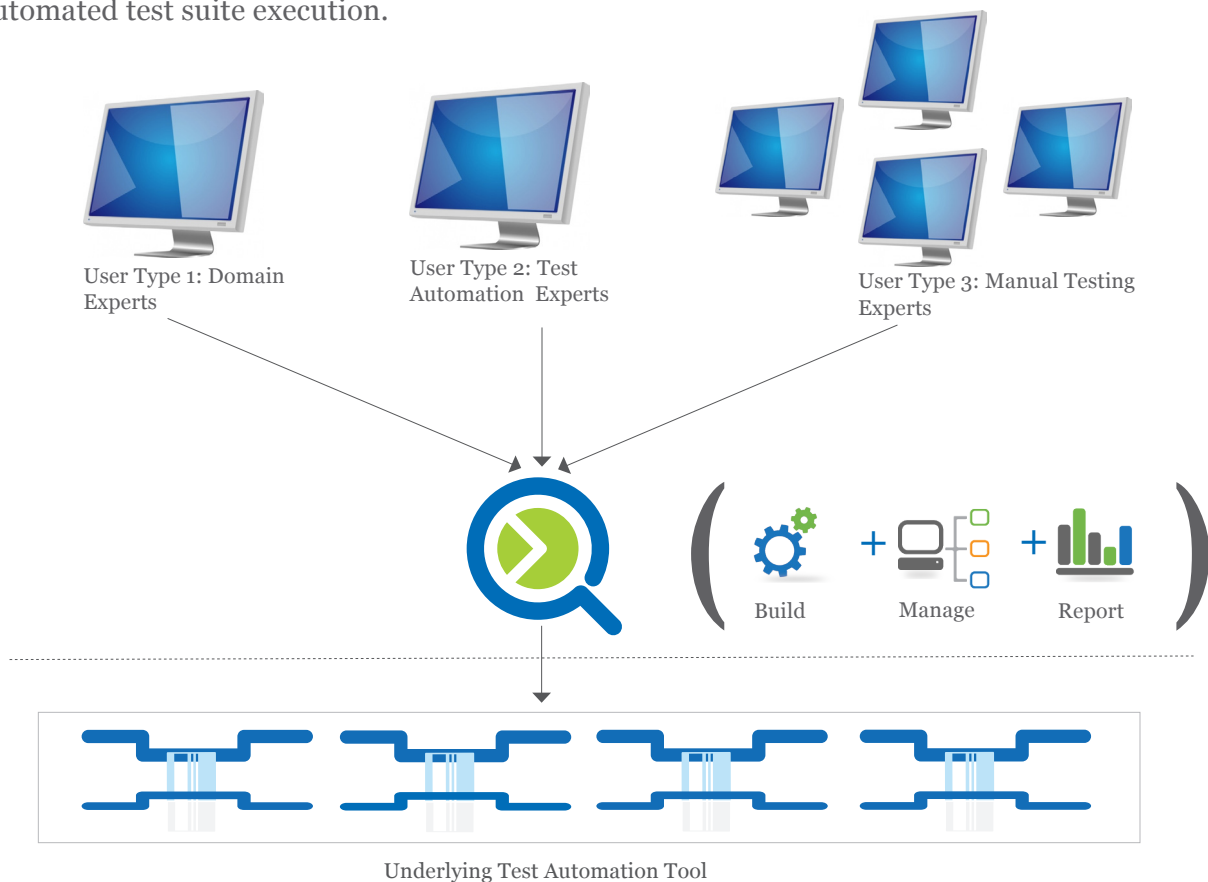

Qualitia breaks this vicious cycle. It forms a layer above any test automation tool and takes care of building test automation, leaving the underlying test automation tool to maximize regression throughput. [With Qualitia you optimize the license cost on test automation tools without having to sacrifice on quality and time of test automation.](#)

System Topology

How does Qualitia work?

Qualitia works on top of any of the test automation tools available in market. From QTP, Selenium, to Rational Functional Tester Qualitia seamlessly supports all and their respective features and functionalities. Qualitia relieves the underlying test automation tool from building test automation and lets it focus only on the automated test suite execution.

Your QC team including subject matter experts and business analysts can now collaborate to build unprecedented quality in the product. Qualitia can also interface with test management and version control software to comprehensively support test automation across the entire application lifecycle.

Qualitia

Feature list.

Qualitia extends a powerful and true script free environment to build test automation. Qualitia is not a replacement for any of the test automation tools available in the market, but works in conjunction with them. Each license includes a full range of the following functionalities:

1. Script-free environment to automate test cases
2. Supports leading test automation tools available in the market
3. Full library support of 500 actions that makes script-free test automation possible across all test automation tools
4. Manage end-to-end tests to validate complete workflow of the application
5. Supports object spy functionality for all the leading test automation tools
6. Track objects, functionalities, and test cases across test automation life cycle to instantly manage changes whenever the application undergoes change
7. Manage versions in any version control tool
8. Export automated test suites which can be further shared with end customer to run on any of the test automation tool directly
9. Web based reporting for multi-user collaboration
10. Export reports into all popular formats like HTML, CSV, and EXCEL
11. Reports can be customized to suit individual team's requirements
